REWall   **(REB1675)**   **Item Type:** Route   **Type Class:** If Then

---

Route Details: At the RE Wall all relevant RU and Person level data established in Re-enumeration are copied to areas (arrays and external databases) more readily accessible by the various parts of the instrument to facilitate programming and reduce performance issues. Preloaded data is also added to these areas creating a static quick reference library for the rest of the program. This is done once and a virtual "wall" is dropped so users cannot go back to Re-Enumeration and change primary data points (name, age, gender, etc.) that could, in turn, take large swaths of data off.

In addition to copying person level data and preloaded data to other areas, the RE Wall also performs settings for use in later interview sections and for home office processing.
