

STATISTICAL BRIEF #221

September 2008

Dental Coverage of Children and Young Adults under Age 21, United States, 1996 and 2006

Richard J. Manski, DDS, MBA, PhD and Erwin Brown, Jr., BS

Introduction

This Statistical Brief presents estimates from the 1996 and 2006 Household Component of the Medical Expenditure Panel Survey (MEPS-HC). Moreover, this Brief provides data on the reported prevalence of dental coverage and the relationship of dental coverage to use for children and young adults age 0–20 living in the U.S. noninstitutionalized (community) population. MEPS-HC is an annual household survey sponsored by the Agency for Healthcare Research and Quality (AHRQ) and provides information useful for evaluating trends in dental care use and dental coverage status. In addition, this brief presents data from a period which corresponds with the enactment of the State Children's Health Insurance Program (SCHIP) and public dental coverage only extensions. Estimates are presented as the first in a series of updates to Chartbook 17: *Dental Use, Expenses, Dental Coverage, and Changes, 1996 and 2004*. Only differences that are statistically significant at the 0.05 level are discussed in the text.

Findings

In 2006, a higher percentage of children and young adults under 21 had public dental coverage only than in 1996 (figure 1). Additionally, a smaller percentage of children and young adults under age 21 had no dental coverage in 2006 than 1996.

During 2006, approximately 45.1 percent or 37.2 million children and young adults under the age of 21 in the United States had at least one dental visit, compared with approximately 42.2 percent or 34.8 million children and young adults under the age of 21 during 1996 (figure 2). The likelihood of having a dental visit for children and young adults under 21 with public dental coverage increased from 28.4 percent in 1996 to 35.1 percent in 2006. There was no significant change in the likelihood of having a dental visit during this period for those with no dental coverage.

Children and young adults under age 21 living in poor, low-income, and middle-income families were much more likely to have public dental coverage only, and less likely to have no dental coverage in 2006 than in 1996 (figure 3).

Children and young adults under age 21 living in high-income families were more likely to have private dental coverage in 2006 than in 1996 (79.9 percent vs. 73.4 percent), and less likely to have no dental coverage in 2006 than in 1996 (17.9 percent vs. 24.8 percent).

Highlights

- There was a significant increase in the percentage of children and young adults under 21 with public dental coverage only from 1996 to 2006.
- Poor, low, and middle income children and young adults under the age of 21 were much more likely to have public dental coverage only and less likely to have no dental coverage in 2006 than in 1996.
- In 2006, it was more likely for black non-Hispanic, Hispanic, and white non-Hispanic persons younger than 21 to have public dental coverage only, and less likely for them to have no dental coverage, than in 1996.
- A higher proportion of children and young adults under the age of 21 had at least one dental visit in 2006 than in 1996.

Black non-Hispanic, Hispanic, and white non-Hispanic children and young adults under 21 were much more likely to have public dental coverage only and less likely to have no dental coverage in 2006 than in 1996 (figure 4).

Data Source

Estimates shown in this Statistical Brief are drawn from analyses of the following public use files: 1996 Full Year Consolidated Data File HC-012, and 2006 Full Year Population Characteristics Data File HC-099.

Definitions

Dental visit

Dental visit refers to care by or visits to any type of dental care provider, including general dentists, dental hygienists, dental technicians, dental surgeons, orthodontists, endodontists, and periodontists.

Dental Coverage Variables

The variable for dental coverage indicates if a sample person was eligible to have payments made to a dental care provider on their behalf for dental care obtained during 1996 and 2006. For a detailed explanation of the dental coverage variables please see MEPS Chartbook No. 17 Definition of Terms, http://www.meps.ahrq.gov/mepsweb/data_files/publications/cb17/cb17.pdf.

Income

Income is expressed in terms of poverty status, the ratio of the family's income to the Federal poverty thresholds, which control for the size of the family and the age of the head of the family (see the 2006 U.S. Department of Health and Human Services Poverty Guidelines at <http://www.aspe.hhs.gov/poverty/06poverty.shtml> for more details). In this Brief, the following classification was used:

Poor—Persons in families with income less than or equal to 100% of the poverty line are considered poor. Some of these persons are in families reporting negative income.

Low income—Persons in families with income over 100% through 200% of the poverty line are considered low income.

Middle income—Persons in families with income over 200% through 400% of the poverty line are considered middle income.

High income—Persons in families with income over 400% of the poverty line are considered high income.

Population Characteristics

In general, population characteristics were measured as of December 31st of the year of study (1996 or 2006), or the last date that the sample person was part of the civilian noninstitutionalized (community) population living in the United States prior to December 31st of that year.

Race/Ethnicity—Comparisons by race/ethnicity in this Chartbook are based on the following four race/ethnicity groups: black non-Hispanic, white non-Hispanic, Hispanic and other. Other includes non-Hispanics who reported to be of a single race other than white or black (i.e., American Indian/Alaska Native, Asian, or Native Hawaiian/Pacific Islander) as well as non-Hispanics who reported to be of multiple races (possibly including black).

About MEPS-HC

MEPS-HC is a nationally representative longitudinal survey that collects detailed information on health care utilization and expenditures, health insurance, and health status, as well as a wide variety of social, demographic, and economic characteristics for the civilian non-institutionalized population. It is cosponsored by the Agency for Healthcare Research and Quality and the National Center for Health Statistics.

For more information about MEPS, call the MEPS information coordinator at AHRQ (301-427-1656) or visit the MEPS Web site at <http://www.meps.ahrq.gov/>.
