Expenditures for Treatment of Mental Health Disorders among Children, Ages 5-17, 2009-2011: Estimates for the U.S. Civilian Noninstitutionalized Population

Karen E. Davis, MA

Introduction

Mental health disorders affect a person's emotional, social, and behavioral well-being. As a result of the Patient Protection and Affordable Care Act, mental health disorder services are currently part of the essential benefits package, a set of health care service categories that must be covered by certain plans, including all insurance policies that are offered through State-based Exchanges, and Medicaid.

This Statistical Brief presents estimates based on the Household Component of the Medical Expenditure Panel Survey (MEPS-HC) on the use of and expenditures for all medical care, which includes inpatient stays, ambulatory care (office-based provider and hospital outpatient visits), and prescribed medicines to treat mental health disorders among school-age children in the U.S. civilian noninstitutionalized population. Average annual estimates for 2009–2011 are shown by type of service and source of payment. Expenditures for pooled years are expressed in constant dollars by inflating those for 2009–10 to 2011 U.S. dollars using the Personal Health Care Expenditure (PHCE) price index component of the National Health Expenditure Accounts (http://www.meps.ahrq.gov/mepsweb/about_meps/Price_Index.shtml). All differences between estimates noted in the text are statistically significant at the 0.05 level or better.

Findings

An annual average of 9.3 percent of U.S. children ages 5–17 (about 5.0 million children, data not shown in figure) received some type(s) of treatment for mental health disorders in 2009–2011 (figure 1), with 7.0 percent of U.S. children ages 5–17 receiving ambulatory care and 2.1 percent receiving prescription medications during this period. On average, less than 1.0 percent used other services such as hospital inpatient stays, emergency room visits, or home health care.

During the 2009–2011 period, an average annual total of $10.9 billion (in 2011 dollars) was spent on treatment of mental health disorders among children ages 5–17. On average, 44.0 percent of these expenditures were for prescription medicines ($4.8 billion) and 34.9 percent were for ambulatory visits ($3.8 billion) (figure 2).

The annual mean expenditure per child ages 5–17 for the treatment of mental health disorders (among those with expenses for mental health) averaged $2,192 during 2009–2011. The mean expense per child for ambulatory visits averaged $999 and $1,246 for prescription medications (figure 3).

Variations by selected demographic characteristics

The average annual percentage with reported treatment for mental health disorders in 2009–2011 was slightly higher for children ages 12–17 years (10.5 percent) than those 5–11 years (8.2 percent) (figure 4). More school-age boys received treatment for mental health disorders (12.2 percent) than girls (6.2 percent). In addition, a higher proportion of non-Hispanic white children ages 5–17 were treated for mental health disorders (11.8 percent) than Hispanic children (4.9 percent), non-Hispanic black children (7.7 percent), or non-Hispanic children of other races (6.8 percent).
During 2009–2011, the average annual expenditure for treatment of mental health disorders for children ages 5–17 with treatment was higher for non-Hispanic blacks ($2,334) than non-Hispanic whites ($2,177), or non-Hispanic others ($1,862) (figure 5). However, there was no significant difference in the means between Hispanics and non-Hispanic blacks, younger and older school-age children, or between boys and girls.

Sources of payment
Nearly half (46.8 percent) of average annual total expenditures for the treatment of mental health disorders for school-age children in 2009–2011 was paid by Medicaid, while private insurance paid 31.9 percent, and 13.6 percent was paid out of pocket by families or other individuals (figure 6). About 12.0 percent of the expenses for prescription medicines and 22.9 percent of the expenses for ambulatory visits were paid out of pocket (data not shown in figure).

Data Source
The estimates shown in this Statistical Brief are based on data from the following MEPS data files for 2009–2011: Full Year Consolidated (HC-129, HC-138, HC-147); Medical Conditions (HC-128, HC-137, HC-146); Prescribed Medicines (HC-126A, HC-135A, HC-144A); Hospital Inpatient Stays (HC-126D, HC-135D, HC-144D); Emergency Room Visits (HC-126E, HC-135E, HC-144E); Outpatient Visits (HC-126F, HC-135F, HC-144F); Office-Based Medical Provider Visits (HC-126G, HC-135G, HC-144G); and Home Health (HC-126H, HC-135H, HC-144H).

Definitions
Mental health disorders
This Brief analyzes school-age children ages 5–17 with mental health disorders in connection with health care utilization. The conditions reported by respondents were recorded by interviewers as verbatim text, which were then coded by professional coders to fully specified ICD-9-CM codes. These codes were regrouped in clinically homogenous categories known as CCS codes. Conditions with CCS codes 650–670 (mental health) were used for this Brief. A crosswalk of ICD-9 codes and CCS codes is available in the documentation file of the Medical Conditions File. For additional information on crosswalk between ICD-9 codes and CCS codes, please visit: http://www.hcup-us.ahrq.gov/toolssoftware/ccs/ccs.jsp.

Ambulatory care
Any visit to a hospital outpatient department, private doctor’s office, group practice, health clinic, walk-in surgiclinic/center, walk-in urgi-care center, company or school clinic, infirmary, neighborhood health clinic, family planning center, or mental health facility.

Expenditures
Expenditures associated with treated medical conditions in MEPS are defined as payments from all sources for hospital inpatient care, ambulatory care provided in offices and hospital outpatient departments, care provided in emergency departments, paid care provided in the patient’s home (home health), and the purchase of prescribed medications. Sources include direct payments from individuals, private insurance, Medicare, Medicaid, Workers’ Compensation, and miscellaneous other sources. Payments for over-the-counter drugs are not included in MEPS total expenditures. Indirect payments not related to specific medical events, such as Medicaid Disproportionate Share and Medicare Direct Medical Education subsidies, are also excluded.

Expenditures were classified as being associated with mental health if a visit, stay, or medication purchase was cited as being related to mental health. Expenditures may be associated with more than one condition and therefore may include some spending for conditions other than mental health. Total spending does not include amounts paid for other medical expenses, such as durable and nondurable supplies, medical equipment, eyeglasses, ambulance services, and dental expenses, because these items could not be linked to specific conditions.

Racial and ethnic classifications
Classification by race and ethnicity was based on information reported for each family member. Respondents were asked if each family member was Hispanic or Latino. Respondents were also asked which race or races best described each family member. Race categories included white, black/African American, American Indian or Alaska Native, Asian, Native Hawaiian or other Pacific Islander, and other. Based on these questions, sample persons were classified into the following race/ethnicity categories: Hispanic, black non-Hispanic single race, white non-Hispanic single race, and other (Asian non-Hispanic single race, Hawaiian/Pacific Islander non-Hispanic, American Indian/Alaska Native non-Hispanic, and multiple races non-Hispanic).

Sources of payment
- **Private insurance**: This category includes payments made by insurance plans covering hospital and other medical care (excluding payments from Medicare, Medicaid, and other public sources), Medigap plans, and TRICARE (Armed Forces-related coverage).
- **Medicare**: Medicare is a federally financed health insurance plan for the elderly, persons receiving Social Security disability payments, and persons with end-stage renal disease. Medicare Part A, which provides hospital insurance, is automatically given to those who are eligible for Social Security. Medicare Part B provides
supplementary medical insurance that pays for medical expenses and can be purchased for a monthly premium. Medicare Part D, which started in 2006, covers prescription drug expenses.

- **Medicaid/CHIP:** This category includes payments made by the Medicaid and CHIP programs which are means-tested government programs financed jointly by federal and state funds that provide health care to those who are eligible. Medicaid is designed to provide health coverage to families and individuals who are unable to afford necessary medical care while CHIP provides coverage to additional low income children not eligible for Medicaid. Eligibility criteria for both programs vary significantly by state.

- **Out of pocket:** This category includes expenses paid by the user or other family member.

- **Other sources:** This category includes payments from other federal sources such as Indian Health Service, military treatment facilities, and other care provided by the federal government; various state and local sources (community and neighborhood clinics, state and local health departments, and state programs other than Medicaid/CHIP); various unclassified sources (e.g., automobile, homeowner's, or other liability insurance, and other miscellaneous or unknown sources); Medicaid/CHIP payments reported for persons who were not reported as enrolled in the Medicaid or CHIP programs at any time during the year; and private insurance payments reported for persons without any reported private health insurance coverage during the year.

### About MEPS-HC

MEPS-HC is a nationally representative longitudinal survey that collects detailed information on health care utilization and expenditures, health insurance, and health status, as well as a wide variety of social, demographic, and economic characteristics for the U.S. civilian noninstitutionalized population. It is cosponsored by the Agency for Healthcare Research and Quality and the National Center for Health Statistics.

For more information about MEPS, call the MEPS information coordinator at AHRQ (301-427-1406) or visit the MEPS Web site at [http://www.meps.ahrq.gov/](http://www.meps.ahrq.gov/).
